

BIC OPEN CHALLENGE

The **BIC Open Challenge** is an innovation initiative implemented by Trentino Sviluppo S.p.A. aiming at finding technological solutions to concrete needs expressed by companies located within its Business Innovation Centers. The initiative also aims at encouraging the cooperation among large and small companies.

Micro and small companies can apply as Solvers and work on a project aimed at meeting the Seeker's goal (e.g. identifying a processing system that allows to deal with different computer protocols in order to extend the Seeker's IoT platform).

A jury identifies the five most innovative and feasible proposals, among which a winner is selected. The winner will start a collaboration with the Seeker in order to meet the objectives of the Challenge.
